

FILE STATUS AS OF 26.07.94:

P N Lee: Hungarian Autopsy Study

Following the meeting at Neuchâtel, July 25th 1994, the following proposals are expected in the near future:

1. Regarding preparation of publications from the 2000 person study, on malignancies in general, liver cirrhosis and possibly multiple malignancies.
2. A serial autopsy study based at the Institute for Pulmonology, with more complete smoking data better lung cancer diagnostic techniques.
3. Historical trends in disease incidence from autopsy records available since 1880.
4. A study attempting to establish the basis of diagnosis on death certificates outside hospitals, i.e. from G:P's.

These should be received for review by S&T, Tony Andrade preferably before mid to end September, so that recommendations can be made for budgets for 1995, in October.

Furthermore, we should expect expense claims from PNL, FJCR and the hungarian Prof's, for train, taxi and sundry expenses during their visit to Neuchatel, along with one days fees. Prof's Kendrey and Szende will send us details of their German and Austrian accounts for payment. Fees should be expected to be around 1000DM for the hungarians, and £500 each for Francis and Peter.

October 19, 1994

Received proposal. Discussed w/HER. Sent to Tony Andrade. HER has no interest. Outcome will depend on position of C. Wall & T. Andrade.
